

Langfang Zhongyide Petroleum & Gas Equipment Co., Ltd

Our product was applied in the following projects:

- Kazakhstan -China natural gas pipeline project
- Central Asia natural gas pipeline project- Uzbekistan section
- China- Russia crude oil pipeline project
- Niger crude oil pipeline project
- Chad crude oil pipeline project
- India west-east natural gas pipeline project

ISO9001 CERTIFICATE

Langfang Zhongyide Petroleum & Gas Equipment Co., Ltd is one of the leading companies in China which specialize in manufacturing & processing spare parts and accessory for oil & gas pipeline construction.

Our main product include pipeline set-on weight, pipeline casing insulator, pipeline pigs, and pipeline cathodic protection materials as well as other materials.

Set - on weight

“Heshan” pipeline set-on weight is used for control the pipeline buoyancy when pipeline traverses the river, lake, marshland, or swamp. It is suitable for heavy excavation traversing and high water level long distance area with feature of high directional drilling cost & superior difficulty.

Features:

- Safety, environmental protection, external coating protection.
- Fast construction progress
- Reducing construction cost

Cathodic protection testing station

Cathodic protection testing station is a kind of new product which is designed for cathodic protection of buried metal pipeline according to the specific requirements of pipeline construction designed by our company, which has the advantages such as anti-theft, moisture protection, anti-corrosion, firmness, durability, and so on.

Casing insulator

Pipeline casing insulator is used for protecting the external coating and insulate oil & gas pipeline from the surface of the earth. It is widely used in pipeline construction directional traversing --- roads, railways, rivers as well as all kinds of pipeline construction projects which need to be insulated

Application

Applicable pipeline diameter range from 38mm to 1670mm, and we can also provide special specification according to customer request.

Pipeline pig

The pipeline pig is applied in cleaning the remaining dirt, condensed liquid and corrosive during pipeline construction (such as water, earth, sand, stone, welding slag. etc).

Application

Rust removing, drying, sealing and displacement of the pipeline before construction;
Wax removing, decaling, dewatering and de-dusting of the pipeline during the construction.

Pipeline cathodic protection series

We provide following kinds of pipeline cathodic protection materials according to ASTM A518-86(grade 3) standard. They have higher performance and better quality.

Zinc Anodes

Magnesium Anodes

Aluminum Anodes

Si-Fe Anodes

Aluminum weld thermite mould

Aluminum weld thermite powder

Pipeline

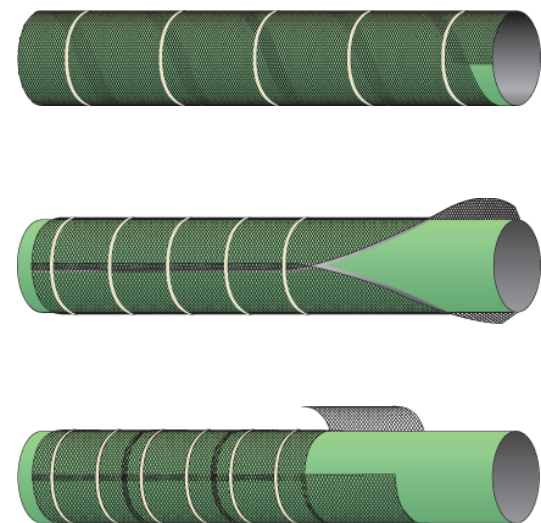

protective layer

Before the pipeline lower-in, wrap up the protective layer around the pipe surface, so the impact force of falling stone or backfilling can be eliminated which protect the protecting coating.

Features:

- high impact resistance
- high elasticity strength
- excellent resistance to breakage
- light weight which is convenient for installation
- no affected by temperature and weather
