Kent Stainless is a specialist fabricator of stainless steel products for a variety of industries incorporated in 1982. We are based in a modern 8000m² factory on a 12 acre site and have full ISO9001:2000 accreditation.

We employ 110 staff including 22 engineers handling customised fabrications.

2009 sees the launch of our Platform Furniture range. Using the experience gained from Dublin's Light Rail System, Luas, Kent Stainless is actively designing customised ranges to suit various projects in UK & Ireland. Working together with specialist lighting suppliers and Real Time Passenger Information (RTPI) Display providers, Kent can seamlessly integrate information displays and advertising to suit each customer requirements

Notable Drainage, Street Furniture or Customised Fabrication projects include:

Wembley Stadium

Colmore Plaza (Birmingham)

Highbury Square (London)

Greater London Assembly

Waterford City Centre

Grimsby Town Centre

Dublin Docklands

Roma Metro Station (Lisbon)

Thomond Park (Munster's Stadium)

Kingston Airport (Jamaica)

Cork Airport

Croke Park Stadium (Dublin)

Luas Tram System (Dublin)

Carton House & Golf Resort (Dublin)

Dashwood house (Liverpool St.)

Benfica - Centro de Estagios do Sport (Lisbon)

Our facilities include Europe's 2nd largest Electropolishing plant and 3-D Laser Cutting.

Stainless steel recycling

Recycling of Kent Stainless Steel

Kent Stainless are fully aware of it's impact on and responsibilities to the environment. We are fortunate to work primarily with a material that has excellent recycling capabilities. Firstly, Stainless Steel is a valuable commodity. Stainless Steel contains Chromium, Molybdenum and Nickel. It's high relative value compared to other steels make it financially viable for the waste recovery industry to fully recycle stainless. In practise this is a self sustaining industry in itself. Stainless suffers no degradation in recycling. What goes in comes out the same just in different shapes and forms in the same quality – ie stainless steel is 100% recyclable.

The Stainless Steel which Kent Stainless uses is made up of recycled stainless steel along with other alloys. In fact approximately 65 - 70% of the end product Kent Stainless produces started life as another stainless product which has then been recycled. This may be left over material from other production runs (new scrap) – off cuts - along with scrappage items that have served their time on the market (old scrap) – kitchen sinks, car exhausts, railings, cutlery. As time goes on, this figure of 70% is predicted to increase. As the demand for stainless steel production rises, more and more 'old scrap' will come on the market – although this only appears at the end of the stainless item's useful life & this is typically in excess of 30 years. Therefore the amount of old scrap that can be recycled is limited by the amount of production that took place many years ago.

Environmental Policy

Kent Stainless (Wexford) Ltd. recognise the need for sustainable development and the responsibility shared with everyone to protect the environment for future generations. Strict environmental protection performance will be achieved by implementing a policy adhered to by Kent Stainless' manufacturing facility, and it's contract installation service. This will include activities provided by other companies on behalf of Kent Stainless.

The policy of the company is to strive in the exercise of its operations to attain:

- Efficient protection of the environment.
- Efficient use of natural resources.
- Proper awareness of all stakeholders.
- Continuous improvement in our environmental performance by minimising environmental impacts associated with our activities.
- Active reduction and prevention of polluting emissions and discharges into the environment.
- Full compliance with environmental legislation.

This intent is supported by our Business Management Systems. The policy and associated documentation is made known to all employees and will be reviewed on a regular basis. Kent Stainless set objectives, targets, programmes and review these in order to continually improve environmental performance. Employees are trained and instructed in sound environmental practice. Kent Stainless have an Integrated Pollution Licence from the EPA (Environmental Protection Agency) since 1997 with 13 conditions of adherence to this licence. An AEP (Annual Environmental Report) is sent to The EPA detailing quantities of the following material recycled annually, and includes the setting of environmental targets for the coming year (reducing water, increasing recycling targets etc.)

Stainless Steel	Mild Steel	Aluminium
Waste Pickling Acids	Hydraulic Oil	Ink
Cardboard Packaging	Paper	Plastic packaging
Timber/Wood (packaging)	Fluorescent Tubes	

Our primary product group, Stainless steel is actively and widely recycled throughout the world. This is a self sustaining process that is economically viable and technically proven in most cases any stainless steel product manufactured worldwide has approximately 50% recycled content. Stainless steel is not consumed, it is fully part of a closed loop sustainable system & does not suffer any degradation.
